AI – Have You Used It?

Discover how Artificial Intelligence can enhance your family history research!

Have you started using Artificial Intelligence (AI), or are you curious about what it can do? Our guest speaker, **Sue O'Brien**, is a member of our committee who, like many of us, has been exploring the world of AI and discovering how useful it can be for family history research.

AI CAN HELP GENEALOGISTS BY:

- Providing historical background
- Explaining the places and times our ancestors lived in
- Helping with research and finding new information
- Bringing ancestors' stories to life with context and understanding
- Generating ideas for further investigation
- Answering questions and interpreting records *and more!*

AI is a valuable tool that can save time, spark ideas and help you uncover more about your ancestors and their world.

GUEST SPEAKER:
Sue O'Brien
Sue will share what she has discovered on her AI journey and demonstrate how it can be used in practical ways for family history research.

Open Discussion
Following Sue's presentation, we'll have an open discussion. **If you've already been experimenting with AI, we'd love you to share your tips, experiences and favourite discoveries with the group.**

Everyone Welcome! | Whether you're completely new to AI or already using it in your family history research, this session is for you!

Come along, learn something new, share ideas and discover how AI can help unlock your family's story.

See you there!
